CHAPTER STUDY OBJECTIVES

1. **Explain the distinguishing features of managerial accounting.** The primary users of managerial accounting reports are internal users, who are officers, department heads, managers, and supervisors in the company. Managerial accounting issues internal reports as frequently as the need arises. The purpose of these reports is to provide special-purpose information for a particular user for a specific decision. The content of managerial accounting reports pertains to subunits of the business and may be very detailed and may extend beyond the double-entry accounting system. The reporting standard is relevance to the decision being made. No independent audits are required in managerial accounting.
2. **Identify the three broad functions of management.** The three functions are planning, directing, and controlling. Planning requires management to look ahead and to establish objectives. Directing involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. Controlling is the process of keeping the activities on track.
3. **Define the three classes of manufacturing costs.** Manufacturing costs are typically classified as either (1) direct materials, (2) direct labor, or (3) manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product.

4. **Distinguish between product and period costs.** Product costs are costs that are a necessary and integral part of producing the finished product. Product costs are also called inventoriable costs. Under the matching principle, these costs do not become expenses until the company sells the inventory to which they attach. Period costs are costs that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.
5. **Explain the difference between a merchandising and a manufacturing income statement.** The difference between a merchandising and a manufacturing income statement is in the cost of goods sold section. A manufacturing cost of goods sold section shows beginning and ending finished goods inventories and the cost of goods manufactured.
6. **Indicate how cost of goods manufactured is determined.** The cost of the beginning work in process is added to the total manufacturing costs for the current year to arrive at the total cost of work in process for the year. The ending work in process is then subtracted from the total cost of work in process to arrive at the cost of goods manufactured.
7. **Explain the difference between a merchandising and a manufacturing balance sheet.** The difference between a merchandising and a manufacturing balance sheet is in the current assets section. The current assets section of a manufacturing company's balance sheet presents three inventory accounts: finished goods inventory, work in process inventory, and raw materials inventory.
8. **Identify trends in managerial accounting.** Managerial accounting has experienced many changes in recent years. Among these are a shift toward addressing the needs of service companies and improving practices to better meet the needs of managers. Improved practices include a focus on managing the value chain through techniques such as just-in-time inventory and total quality management. In addition, techniques such as activity-based costing (ABC) have been developed to improve decision making. Finally, the balanced scorecard is now used by many companies in order to attain a more comprehensive view of the company's operations.

TRUE-FALSE STATEMENTS

1. Reports prepared in financial accounting are general-purpose reports, whereas reports prepared in managerial accounting are usually special-purpose reports.

Ans: T, SO: 4, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

21. Ending finished goods inventory appears on both the balance sheet and the income statement of a manufacturing company.

Ans: T, SO: 5, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

22. The beginning work in process inventory appears on both the balance sheet and the cost of goods manufactured schedule of a manufacturing company.

Ans: F, SO: 5, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

23. In calculating gross profit for a manufacturing company, the cost of goods manufactured is deducted from net sales.

Ans: F, SO: 5, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

24. Finished goods inventory does not appear on a cost of goods manufactured schedule.

Ans: T, SO: 6, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

25. If the ending work in process inventory is greater than the beginning work in process inventory, then the cost of goods manufactured will be less than total manufacturing costs for the period.

Ans: T, SO: 6, Bloom: C, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Industry/Sector, AICPA FN: Measurement, AICPA PC: Problem Solving, IMA: Cost Management

26. Finished goods inventory for a manufacturing company is equivalent to merchandise inventory for a merchandising company.

Ans: T, SO: 7, Bloom: C, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

27. Raw materials inventory shows the cost of completed goods available for sale to customers.

Ans: F, SO: 7, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

28. The balanced scorecard approach attempts to maintain as little inventory on hand as possible.

Ans: F, SO: 8, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Industry/Sector, AICPA FN: Risk Analysis, AICPA PC: Problem Solving, IMA: Performance Measurement

29. The supply chain is all the activities associated with providing a product or service.

Ans: F, SO: 8, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Industry/Sector, AICPA FN: Measurement, AICPA PC: None, IMA: Global Business

30. Many companies have significantly lowered inventory levels and costs using just-in-time inventory methods.

Ans: T, SO: 8, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Industry/Sector, AICPA FN: Risk Analysis, AICPA PC: None, IMA: Cost Management

31. Managerial accounting is primarily concerned with managers and external users.

Ans: F, SO: 1, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Industry/Sector, AICPA FN: Decision Modeling, AICPA PC: None, IMA: Business Economics

32. Planning involves coordinating the diverse activities and human resources of a company to produce a smooth running operation.

33. When the physical association of raw materials with the finished product is too small to trace in terms of cost, they are usually classified as indirect materials.

Ans: T, SO: 3, Bloom: C, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Measurement, AICPA PC: None, IMA: Cost Management

34. Product costs are also called inventoriable costs.

Ans: T, SO: 4, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Measurement, AICPA PC: None, IMA: Cost Management

35. Direct materials become a cost of the finished goods manufactured when they are acquired, not when they are used.

Ans: F, SO: 5, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Measurement, AICPA PC: None, IMA: Cost Management

36. The sum of the direct materials costs, direct labor costs, and beginning work in process is the total manufacturing costs for the year.

Ans: F, SO: 6, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

37. In a manufacturing company balance sheet, manufacturing inventories are reported in the current assets section in the order of their expected use in production.

Ans: F, SO: 7, Bloom: K, Difficulty: Easy, Min: 1, AACSB: None, AICPA BB: Legal/Regulatory, AICPA FN: Reporting, AICPA PC: None, IMA: Reporting

Solution 172 (12–17 min.)

Raw materials:	$(100 - 70) \times \$120 = \$3,600$
Work in process:	$(50 \times 20\%) \times \$120 = \$1,200$
Finished goods:	$(50 \times 80\% \times 50\%) \times \$120 = \$2,400$
Cost of goods sold:	$(50 \times 80\% \times 50\%) \times \$120 = \$2,400$
Selling expenses:	$20 \times \$120 = \$2,400$

Costs to account for: $100 \times \$120 = \$12,000$

Raw materials inventory	\$ 3,600
Work in process inventory	1,200
Finished goods inventory	2,400
Cost of goods sold	2,400
Selling expenses	<u>2,400</u>

Solution 176 (12–16 min.)

$$A + \$57,000 + \$46,500 = \$195,650$$

$$A = \$92,150$$

$$\$249,500 - \$9,000 = F$$

$$F = \$240,500$$

$$\$195,650 + B = \$221,500$$

$$B = \$25,850$$

$$\$130,000 + G + \$102,000 = \$263,700$$

$$G = \$31,700$$

$$\$221,500 - C = \$180,275$$

$$C = \$41,225$$

$$\$263,700 + H = \$337,000$$

$$H = \$73,300$$

$$\$65,400 + \$86,000 + \$81,600 = D$$

$$D = \$233,000$$

$$\$337,000 - \$80,000 = I$$

$$I = \$257,000$$

$$\$233,000 + \$16,500 = E$$

$$E = \$249,500$$

SHORT-ANSWER ESSAY QUESTIONS

S-A E 202

Financial and managerial accounting are both concerned with the economic events of an enterprise. Similarities between financial and managerial accounting do exist, but they do have a different focus. Briefly distinguish between financial and managerial accounting as they relate to (1) the primary users, (2) the type and frequency of reports, (3) the purpose of reports, and (4) the content of reports.

Ans: N/A, SO: 1, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector, AICPA FN: Reporting, AICPA PC: Communication, IMA: Business Economics

Solution 202

Financial accounting is primarily concerned with external users such as stockholders and creditors, while the primary users of managerial accounting are those within the company (internal users) such as officers, managers, supervisors, etc. Quarterly and annual classified financial statements are the end product of financial accounting. Internal reports, prepared as often as needed are the result of managerial accounting. The financial statements produced by financial accounting are general-purpose reports which are highly aggregated, pertain to the enterprise as a whole, and are constrained by generally accepted accounting principles. The internal reports prepared by management accountants are special purpose reports which are detailed, pertain to subunits of the enterprise, and may contain any information relevant to the decision at hand.

Julie Mills is studying for her accounting mid-term examination. Summarize for Julie what she should know about management functions.

Ans: N/A, SO: 2, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector, AICPA FN: Measurement, AICPA PC: Communication, IMA: Business Economics

Solution 203

Julie should know that the management of an organization performs three broad functions:

- (1) **Planning** requires management to look ahead and to establish objectives.
- (2) **Directing** involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation.
- (3) **Controlling** is the process of keeping the company's activities on track.

S-A E 204

A manufacturing company makes the products that it sells. Briefly identify and define the cost elements that are incurred in making a product. After product cost elements are identified, how is the cost of goods manufactured for a period determined?

Ans: N/A, SO: 3, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector, AICPA FN: Reporting, AICPA PC: Communication, IMA: Business Economics

Solution 204

Costs incurred to manufacture a product include direct materials which can be physically and directly associated with the finished product; direct labor, which is the work of factory employees which can be physically and directly associated with the finished product; and manufacturing overhead, those manufacturing costs which are indirectly associated with production of the finished product. Cost of goods manufactured is computed by adding the cost of direct materials used, direct labor, and manufacturing overhead to the beginning work in process, and subtracting the ending work in process.

S-A E 205

Kevin Scott is confused about the differences between a product cost and a period cost. Explain the differences to Kevin.

Ans: N/A, SO: 4, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector, AICPA FN: Reporting, AICPA PC: Communication, IMA: Business Economics

Solution 205

Product costs, or inventoriable costs, are costs that are a necessary and integral part of producing the finished product. Period costs are costs that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.

S-A E 206

Assume you have just taken a position as controller for a new company that manufactures and sells wrought iron wall hangings. Although the founder of the company, who is the president and CEO, is a great artisan, she has very limited knowledge of accounting.

Instructions

To help your new boss better understand accounting for a manufacturing organization, prepare a response to her in which you: (1) identify, (2) describe, and (3) provide examples of the three manufacturing costs and the three inventory accounts used in accounting for a manufacturing company.

Ans: N/A, SO: 3, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Communications, AICPA BB: Industry/Sector, AICPA FN: Reporting, AICPA PC: Communication, IMA: Business Economics

Solution 206

The three manufacturing costs are: direct materials, direct labor, and manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The iron used in making the wall hangings is an example of direct materials. The work of factory employees that can be physically and directly associated with converting raw materials to finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product. These costs may also be manufacturing costs that cannot be classified as direct materials or direct labor. Manufacturing overhead includes indirect materials, indirect labor, and depreciation on factory buildings, and machinery, utilities, insurance, taxes and maintenance on factory facilities.

The three inventory accounts are: raw materials, work in process, and finished goods. Raw materials inventory represents the cost of the materials and parts that are to be used in the manufacturing process. The iron purchased to make the wall hangings would be considered raw materials until the time it was put into production. Work in process is the cost applicable to units that have been started into production but are only partially complete. Wall hangings on the assembly line that are in various stages of completion would be work in process. The finished goods inventory represents the cost of completed goods that have not been sold. The cost of wall hangings that are completed but have not been sold would be finished goods.

S-A E 207 (Ethics)

Million Dollar Mills is a textile manufacturing firm located in the southern United States. The company carefully prepares all financial statements in accordance with GAAP, and gives a copy of all financial statements to each department. In addition, the company keeps records on quality control, safety, and environmental pollution by the company. It then prepares "scorecards" for each department indicating their performance. Recently, the financial impact of the second set of information was added, and the information has been used in the evaluation of employees for merit pay and promotions.

At the most recent employee meeting, Tyler Hanes, marketing manager, expressed his discomfort with the system. He said there was no guarantee that the second set of information was fair, since there were no generally accepted principles for this kind of information. He also said that it was kind of like keeping two sets of books—one following all legal requirements, and the other one actually used by the company.

Required:

1. Is it ethical to evaluate managers in the way described? Explain briefly.
2. Name at least two safeguards the company could build into its system to ensure the ethical treatment of employees.

Ans: N/A, SO: 8, Bloom: K, Difficulty: Easy, Min: 5, AACSB: Ethics, AICPA BB: Legal/Regulatory, AICPA FN: Decision Modeling, AICPA PC: Communication, IMA: Decision Analysis

Solution 207

1. It is ethical for a company to use all available data in order to evaluate managers, and even to collect data not routinely available. In fact, such a method seems preferable to one in which the company may only use specified financial data in its evaluation of a manager's performance. It does not imply a departure from GAAP, nor that the company does not actually use the information prepared according to GAAP. It supplements the standard reports, it does not replace them.

Solution 207 (Cont.)

2. The company should make certain that the appropriate information is calculated in the same way each period. All the relevant data should be collected and reported each period. New data should be limited. The qualitative information should be complemented, not replaced, by the regular financial information.

S-A E 208 (Communication)

Volumetrica, a producer of audio equipment for large computer systems, is reviewing its policies as part of a biannual self-examination of the company. As part of this process, all managers have been asked to carefully examine costs and determine as closely as possible which costs are direct and which are indirect.

Linda Bedard and Sam Hilton, managers of different manufacturing departments in the same building, have been working together. They found the following four costs that could be economically traced to the products, but have historically been a part of overhead:

- Cost of setting up the machinery for a different production run.
- Cost of minor assembly components such as knobs and switches.
- Cost of packaging, which is quite different for each model.
- Cost of inspecting and testing each model.

None of the costs is significant by itself, but together these four costs make up between 10 and 15% of the total cost of the product. Linda favors "leaving well enough alone," as she puts it, and leaving these costs in overhead. She is afraid that her volunteering to trace these costs will result in her having to trace many more costs in the future. Sam, on the other hand, prefers to have the product cost as accurate as possible. He points out that these costs are already known, and the process would require little extra work.

Required:

You have been called on in your function as accounting manager to resolve the dispute. Write a memo to Linda and Sam, supporting one or the other position. Be sure to adequately defend your position, but be brief.

Solution 208

TO: Linda Bedard and Sam Hilton

FROM: Nancy West, Accounting Manager

RE: Tracing overhead

I strongly support the tracing of as much of what is now overhead directly to the products as possible (sorry, Linda). Besides giving more accurate product costs now, as Sam says, it will help us considerably in the future. We can evaluate products better, the more we know about which costs they generate. Otherwise, we just assign them some amount of overhead, which may be either more or less than they actually cost.

Thank you both for your hard work. It is true, as Linda says, that our reviews will (temporarily) cause us more work (sorry, Sam). However, I think you'll both agree that the benefits of knowing the costs of our products better will make the effort well worthwhile.

So, let's start tracing the four costs you mentioned now. Once we have the glitches ironed out, we'll share the results with the other departments.
